

**2019 TOTALGREEN HISTORICAL PRODUCT CONTENT LABEL <sup>1</sup>**

TotalGreen matches 100% of your electricity usage. In 2019, TotalGreen was made up of the following new renewable resources, averaged annually.

Green-e <sup>®</sup> Energy Certified New <sup>2</sup> Renewables in TotalGreen 2019		Generation Location
Solar	100%	California
Total Green-e <sup>®</sup> Energy Certified New Renewables	100%	California

1. These figures reflect the resource mix of the electricity delivered to TotalGreen customers in 2019.
2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.
3. Due to the disruption caused by the global COVID-19 pandemic, SJCE did not participate in the California Voluntary Renewable Energy Program (VREP) with the CEC. This program allows Renewable Energy Credits (REC's) to be included as part of the state's "cap and trade" program and is normally a requirement for Green-e<sup>®</sup> certification. SJCE still retired all the REC's associated with customers enrolled in TotalGreen, and there is no reduction in the quality or quantity of REC's retired for TotalGreen customers.

For comparison, the current average mix of resources supplying the State of California includes: Coal (3%), Nuclear (9%), Oil (<1%), Natural Gas (35%), Hydroelectric (11%), Renewables (31%) and Unspecified Sources of Power (11%). This resource mix was prepared in accordance with CA state law.

The average home in the State of California uses 546 kWh per month. Source: U.S. EIA, 2018.
