SAN JOSE CLEAN ENERGY
A Program of the City of San José

ELECTRIFY YOUR RIDE, SAN JOSE

About 55% of San José's greenhouse gas emissions come from transportation. SJCE is committed to expanding electric vehicle (EV) adoption to reduce pollution and fight climate change. When charged using electricity supplied by SJCE, you can be confident that EVs are powered by at least 60% renewable energy.

EVs ARE FOR EVERYONE

1 COST LESS THAN GAS-POWERED VEHICLES

With incentives, most new EVs are cheaper to own and operate than traditional gas-powered vehicles. You can save thousands of dollars on fuel and maintenance costs. Charging an EV can cost about half as much as filling up a gas-powered vehicle.

2 RANGE THAT MEETS YOUR NEEDS

Most Californians drive fewer than 32 miles per day, and the average EV has greater than 200 miles of range. Even when you charge using a standard wall outlet overnight, all EVs will get you where you need to go each day.

3 CONVENIENT ACCESS TO EV CHARGING

San José has over 1,600 public EV charging stations! The State of California, along with local investments from SJCE, is investing hundreds of millions of dollars to ensure that public EV charging is available for all.

FUN TO DRIVE

EVs have instant acceleration and better performance than gas-powered vehicles.

SAVE MONEY

EV drivers save thousands of dollars over the lifetime of the vehicle due to lower costs of fuel and maintenance.

BETTER FOR THE ENVIRONMENT

With no tailpipe pollution, EVs bring cleaner air to your neighborhood.
